### **We can't eliminate hepatitis C without removing treatment ...**

In most cases, a liver transplant alone doesn't cure hepatitis C. The infection is likely to return, requiring treatment with antiviral medication to prevent damage to the transplanted liver. Several studies have demonstrated that new, direct-acting antiviral medication regimens are effective at curing post-transplant hepatitis C.

There is no vaccine against hepatitis C. Prevention includes harm reduction efforts among people who inject drugs, testing donated blood, and treatment of people with chronic infection. Chronic infection can be cured more than 95% of the time with antiviral medications such as sofosbuvir or simeprevir.

Treatments for hepatitis C. Hepatitis C can be treated with medicines that stop the virus multiplying inside the body. These usually need to be taken for several weeks. Until recently, most people would have taken 2 main medicines called pegylated interferon (a weekly injection) and ribavirin (a capsule or tablet).

### **Hepatitis C - Treatment - NHS**

New hepatitis C treatments. The Australian government is subsidising revolutionary new hepatitis C medicines for all Australians. General Practitioners can di-

rectly prescribe and manage hepatitis C treatment for their patients, and prescriptions can be filled at many local community pharmacies.. New hepatitis C treatments are simple, quick, highly effective and have few side effects.

Hepatitis C is a curable liver infection that results from the hepatitis C virus. Without proper treatment, chronic hepatitis C infections can lead to severe complications, such as liver disease,...
