Life cycle analysis (LCA) has been defined by the EPA as a way to "evaluate the environmental effects associated with any given industrial activity from the initial gathering of raw materials from the earth until the point at which all residuals are returned to the earth" or "cradle-to-grave." Several organizations have developed methods for LCA, each using a different analytic approach to this complex activity.

Life cycle assessment (LCA) is the most common method used for quantifying environmental impacts and resource use throughout the entire lifecycle of a product or service.
