Speaker Cones – Recone Kits

NON-PRESSED PAPER CONE: It is a clean-cut car subwoofer that boasts a black non-pressed paper cone. It will enhance car stereo by producing a powerful audio and keep equipment safe at the same time **KAPTON VOICE COIL:** The speaker subwoofer comes with a 2" 4 layer high-temperature Kapton voice coil to resist corrosion.

Most manufacturers of monitoring speakers make woofers out of paper. Polypropylene — Polypropylene or plastic cones are easy to work with and perform quite well.

15" High Excursion Paper Cone Subwoofer Driver 4 Ohm

Monitoring Speakers: Which Woofer Material is the Best ...

6.5 inch Car Subwoofer Speaker – Black Non-Pressed Paper ...

As the cone moves back and forth, air is displaced and sound is created. Without this crucial piece, your sub would be useless and your music would suffer drastically. But what exactly does a subwoofer cone do and what makes a high quality cone? Essen-

tially the only moving part in a sub is the cone, making this piece one of the most important.

Basically, paper cones are made of a formulation of various materials, especially a combination of wood, wool, and felt. The paper formulations are also mixed with various chemicals to make them more durable and more ideal for making speaker cones. As such, paper cones can be made of different combinations depending on the manufacturer's design.

Speaker Exchange Speaker repair, replacement, recone, refoam

What is the Impact of Speaker Cone Material in Performance ...

Paper cone like the one used in Velodyne DD18+ can be made lighter than metal cone and therefore improve outputs above 50hz by up to 3db with the sacrifice of slightly higher distortions. For those who are after the maximum headroom in HT application may consider the paper cone version FV18SW (with paper cone SW1825).

Paper cones, made in part from felt and wool have a combination of stiffness, low mass and loss inherent in the material that often

make the best sounding cones. Sometimes rubber can be added to the paper to increase its durability. Tweeters have to vibrate at very high speeds (20kHz range) and are often made from metals such as aluminum, titanium or silk. They must be very stiff while remaining light weight. Mids and woofers are often made with paper (with additives), Kevlar, ceramics or ...

~~Subwoofer cone material—plastic, aluminum, paper—pros ...~~

Papercone now converts 100% of the Tyvek mailing envelope segment and 95% of the paper gusseted envelope market in the United States. I have served on the EMA Board of Directors, the Public Affairs Committee, Chairman of the Membership and Development Committee, and Chairman of the Board from 2012-2014.
Amazon.com: Home Speaker Woofer Cone

Ever since the first electrical loudspeaker—a glorified headphone with a horn on it—was outmoded by the balanced-armature cone speaker, paper has been the standard diaphragm material for speakers reproducing low frequencies. The Rice-Kellogg moving-coil transducer replaced the balanced-armature driving system in 1925, but the paper cone remained. And although many improvements have since been made, were no more major changes in loudspeaker design for over 30 years!
