Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that the Negroid race, as naturally endowed as any other, is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are economic slaves because they lack the 'devil-may-care' attitude and the 'killer instinct' of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In

putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the 'Spider Web Doctrine' - discipline, self-reliance, ruthlessness - to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

Using administrative tax records for UK businesses, we document both bunching in annual turnover below the VAT registration threshold and persistent voluntary registration by almost half of the firms below the threshold. We develop a conceptual framework that can simultaneously explain these two apparently conflicting facts. The framework also predicts that higher intermediate input shares, lower product-market competition and a lower share of business to consumer (B2C) sales lead to voluntary registration. The predictions are exactly the opposite for bunching. We test the theory using linked VAT and corporation tax records from 2004-2014, finding empirical support for these predictions.

Among those ranged against HMRC are the big four accountancy firms, Deloitte, Ernst and Young, KPMG, and PwC, which earn £2 billion each year from their tax work in the UK. They employ nearly 9,000 people just to provide tax advice aimed at minimizing the tax paid. Between them they boast 250 transfer pricing specialists whereas HMRC has only 65 people working in this area. The firms declare that their focus is now on acceptable tax planning and not aggressive tax avoidance however they continue to sell complex tax avoidance schemes with as little as 50 per cent chance of succeeding if challenged in court. The large accountancy firms are in a powerful position in the tax world and have an unhealthily cosy relationship with government. They second staff to the Treasury to advise on formulating tax legislation. When those staff return to their firms, they have the very inside knowledge and insight to be able to identify loopholes in the new legislation and advise their clients on how to take advantage of them. This is a clear conflict of interest which should be banned in a code of conduct for tax advisers. The UK must also take the lead in demanding urgent reform of international tax law, so that companies have to pay a fair share of tax where they actually do business and make profits. Furthermore, the job of simplifying our tax code needs to be taken seriously; yet the Office of Tax Simplifica-

tion has just 6 people working in it

Of all the UK's myriad taxes, VAT is one that affects us all, but as a small business owner it causes a great deal of uncertainty. When, if at all, should you register for VAT? In this new e-book, her third, Emily Coltman ACA, one of the UK's foremost small business accountants, answers all these questions and many more, in the plain, simple English we have come to expect from her work.

The most important and recent judgments of the CJEU Considering the ever increasing importance of indirect taxation as a source of revenue for governments, the intensifying complexity of the legal framework, and the proliferating number of countries adopting indirect taxation, it is essential to scrutinize how the law is actually applied in practice. The primary driving force in this area is, undoubtedly, the Court of Justice of the European Union. This book analyses selected topics (e.g. the Charter of Fundamental Rights of the European Union and VAT, taxable base and rates, exemptions, and deductions) by examining the most prominent and recent judgments of the Court of Justice of the European Union. Experts from all over the world, not just from academia but also government representatives and tax practitioners, have provided their input and helped us compile what is an informative and worthy read for anyone dealing with indirect taxation on a professional basis.

Trading Places? VAT and Customs Treatment of Imports, Exports, Intra-EU Transactions, and Cross -border Supplies of Services in the Digital Age introduces the main concepts and trade facilitation reliefs that businesses must understand if they are to trade internationally with the least intervention and disruption from the Tax Authorities. The worst-case scenario is for an importer to have their goods still within Customs' control, instead of being where they are needed because the correct procedures have not been followed. Allied to this is the need for businesses to secure the release of their goods paying as little import duty and import VAT as possible. Whilst import VAT is recoverable by most businesses it is still a major cash-flow cost, which has to be funded. Import duty is an absolute cost so importers must review all avail-

able means to reduce or remove the duty payable. The book highlights the means of importing goods and arriving at the Customs value on which import duty and import VAT are computed. It also provides commentary on export procedures and the VAT treatment of intra-EU trading, including potential fiscal barriers to exploiting non-UK markets. This second edition introduces the myriad rules concerning intangible services and the taxation of downloaded digitised products. Whilst the rules can be said to be easy to follow, as ever with VAT understanding the exact nature of the service, how it is provided, and where it is consumed are all fundamental problems to be grappled with. Chapters on potential pitfalls and planning for international trade provide the reader with an overview of 'Best-practice' when looking to import or export goods or when setting out to supply services internationally.

A plain English guide to international finance for small UK-based businesses, this book is essential if you're considering exports. The world is shrinking. If your business has a website, or if you're using Twitter or are on LinkedIn, then you and your business can be seen by people right across the world, and lots of them might be your potential customers. There are lots of exciting opportunities out there. But there is always a catch. Keeping on the right side of the taxman can be time-consuming enough if you run a small business and don't sell or buy anything outside the UK. When you look outside our borders, there are even more tax traps waiting for the unwary small business owner. What should you do to make sure you don't fall foul of not only HM Revenue and Customs, but also the tax authorities in the countries where you're buying and selling your wares? What would it mean for tax if you're travelling overseas yourself to carry out a project for a customer, or if you want to be based in the UK and sell goods or services to customers abroad, or if you want to set up a satellite business outside the UK? How should you deal with selling to customers, and buying from suppliers, in foreign currencies? You may well want to keep your business small, but what if you want to have a local staff member or agent abroad? What are the pitfalls? And are there any grants or help available for small busi-

nesses who want to look beyond the UK's shores for customers? Emily Coltman answers all these questions and more in this brand new book. Packed with useful guidance and case studies from UK small business owners who have either spent time working abroad or who are based in the UK but still trade with the world, this book is a must-read for any small business owner who would like to take their business global but is worried about what this would mean for tax.
